### *INTRODUCTION*

Granite School District has contracted with Davis Demographics & Planning, Inc. (DDP) to update and analyze demographic data relevant to the District's facility planning efforts. The scope of contracted work includes mapping the District, address matching the current student file, developing and researching pertinent demographic data, identifying future residential development plans and developing a five-year student population forecast. DDP will then assist the District in developing solutions for housing future student population. Additionally, this study was prepared to assist the District's efforts in evaluating future site requirements and attendance area changes.

The purpose of this report is to identify and inform the District of the trends occurring in the community; how these trends may affect future student population; and to assist in illustrating facility adjustments that may be necessary to accommodate the potential student population shifts. The District can then use this information to better plan for the need, location and timing of facility or boundary adjustments.

The **Sources of Data** section details where the two sources of data, geographic and non-geographic, are collected and how each data item is used in the five-year student population forecast model.

The **Five Year Forecast Methodology** section discusses in detail how the factors used in the study were calculated and why they were used. These factors include: the calculation of incoming kindergarten classes, additional students from new housing (referred to as student yield), the effects of student mobility, and a detailed review of planned residential development within the District.

The **District Student Resident Forecast Summary** sections review the Fall 2019/20 student resident forecast results. Included in these sections are a district wide student population forecast summary and a projected resident student population summary for each existing attendance area and study area.

While reading this report, it is important to remember that this is a snapshot of current and potential student population based upon data gathered in Fall 2019/20. Population demographics change, development plans change, funding opportunities can change, District priorities can change, and therefore, new forecasts and adjustments to the overall Master Plan will continue to be necessary in the future

### EXECUTIVE SUMMARY

Davis Demographics & Planning, Inc. (Davis Demographics) is assisting the Granite School District (District) to plan for future student population changes. By factoring current and historical student data with demographic data and planned residential development, Davis Demographics calculated a five-year student population forecast. This forecast is based upon residence of the students and is designed to alert the District as to when and where student population shifts will occur. Forecast factors, trends and development data is based upon the best information at the time of the analysis. This information can change quickly, and Davis Demographics advises an annual review of forecasts.

The Granite School District provided student data to Davis Demographics for the 2016/17 to the 2019/20 school years. In each of those years the enrolled student population has declined. In 2016/17 there were 65,597 students enrolled in the district split into two categories, Resident Students (residing within the district boundaries) and Non-Resident Students (residing outside of the district boundaries). 63,163 students were resident and 2,434 were non-resident. By the 2019/20 school year the total enrollment declined by 6.5% to 61,349 total students. With a resident student count of 59,166 and non-resident students at 2,183.

The two main reasons for the decline are negative mobility (more students moving out of the district than into the district) and a decline in area births. Looking at the District Wide mobility (bottom of page 6) almost all grade transitions are negative. For example, the District Wide mobility for grade 4 to grade 5 is 97%. That means over the last four years there has been an average of a 3% decline in students transitioning from 4<sup>th</sup> to 5<sup>th</sup> grade. The other factor in declining enrollment is a decline in area births. In Salt Lake County (page 4) reported births declined from a recent high on 19,591 in 2008 to the current low of 16,746 in 2017. This has led to smaller incoming kindergarten class enrollment and affects forecasted kindergarten estimates.

However, parts of Salt Lake County have seen an abundance of new housing and the Granite School District area has benefited from this. Since 2014 there have been approximately 6,000 new hosing units built within the District boundaries. While that seems like a lot of units, about half of them were multifamily units that do not yield as many students as single-family housing. Through discussions with area developers, city and county officials and district staff Davis Demographics estimates there will be approximately 6,000 additional units built within the District by the year 2024. Most of the new units will also be multifamily units with relatively low student yield rates.

Davis Demographics compiled area births, student mobility and new housing data to create a five-year student population forecast. The Granite School District is forecast to continue to decline in students at approximately the same rate as in the last few years. Most of the decline will be at the K-8 level. K-5 student population is forecast to decline by 4% by the 2024/25 school year. Grades 6-8 are forecast to decline by 13.7% and grades 9-12 are forecast to decline by 1.7%. Overall student population is forecast to decline from 61,349 in the 2019/20 school year to 57,877 by the 2024/25 school year, a 3.7% decrease in students.

### **SOURCES OF DATA**

### Geographic Map Data

Five geographic data layers are used in the five-year student population forecasts:

- 1. Street Centerline Database/Parcels
- 2. Study Areas
- 3. Schools
- 4. Students Historical and Current
- 5. Planned Residential Development

### Granite School District GIS

The Granite School District GIS Department provided Davis Demographics with almost all of the GIS data required to calculate a forecast. This data included streets, parcels, study areas, schools, current and historic students

### Student Accounting

| Student Accounting Summary                       |        |  |  |  |  |  |
|--|--------|--|--|--|--|--|
| School Year 2019/20 Actual Enrollment (10/02/19) |        |  |  |  |  |  |
| Total Students Provided by District 61,349       |        |  |  |  |  |  |
| Students Residing out of District                | -2,183 |  |  |  |  |  |
| Students used in Residential Forecast -          | 59,166 |  |  |  |  |  |

Table 1- Student Accounting

<u>Planned Residential Development</u> – Planned residential development data, Table 4, is collected to determine the number of new residential units that will be built over the five-year timeframe of the student population forecasts. The projected units within the next five years will have the appropriate Student Yield Factor, Table 6, applied to them to determine the number of new students planned residential development will yield.

This data was obtained through discussions with the major developers within the District boundaries, the planning departments of South Salt Lake City, West Valley City, Taylorsville City and Millcreek City, the planning department of Salt Lake County and District officials. A database map of the planned residential development was created, including, when available, project name, location, housing type, total number of units and estimated move-in dates (phasing schedule). Projected phasing is based upon occupancy of the unit and is used to help time the arrival of students from these new developments.

In the student population forecast by residence DDP includes all approved and tentative tract maps in addition to any planned or proposed development that possibly will occur

within the forecast timeframe. The planned residential development information and phasing estimates is a snapshot of the District at the time of this study. All of the Information may change and should be updated annually (see Table 4).

### **Forecast Factors**

Three basic sets of forecast factors were compiled and reviewed for use in the five-year student population forecasts by residence:

- 1. Births by County
- 2. Mobility Factors
- 3. Student Yield Factors
- 1) Births by County Data Birth data by county was obtained from the Utah State Department of Health for the years 2005-2017. Past changes in historical birthrates are used to estimate incoming kindergarten student population from existing housing.
- **2)** Mobility Factors Mobility refers to the increase/decrease in the migration of students within the District boundaries (move-in/move-out of students from existing housing). Mobility, similar to a cohort, is applied as a percentage of increase/decrease among each grade for every year of the forecasts
- *3)* Student Yield Factors 5 Year Forecasts Closely related to the planned residential development units are Student Yield Factors. The Student Yield Factors, when applied to planned residential development units, determine how many additional students will be generated from new construction within the District.

### FIVE YEAR FORECAST METHODOLOGY

The forecast methodology used in this study combines historical student population figures, past and present demographic characteristics, and planned residential development to forecast future student population at the study area level. District-wide forecasts are summarized from the individual study area forecasts. These forecasts are based on where the students reside and their school of residence. DDP utilizes, the actual location of where the students reside, as opposed to their school of enrollment, in order to provide the most accurate estimate of where future school facilities should be located. The best way to plan for future student population shifts is to know where the next group of students will reside. The following details the methodology used in preparing the student population forecasts by residence.

### Five-Year Forecasts

Forecasts are calculated out five years from the date of forecast for several reasons. The planning horizon for any type of facility is typically no less than five years, often longer. Five years are sufficient to adequately plan for a student population shift and facility restructuring. It is a short to midterm solution for planning needs. Forecasts beyond five years are based on speculation due to the lack of reliable information on birthrates, new home construction, economic conditions etc.

### Why Forecasts are Calculated by Residence

Typically, school district forecasts are based on enrollment by school. However, this method is inadequate when used to locate future school facility requirements, because the location of the students is not taken into consideration. A school's enrollment can fluctuate due to variables in the curriculum, program changes, school administration and open enrollment policies. These variables can skew the apparent need for new or additional facilities in an area.

The method used by DDP is unique because it modifies a standard cohort forecast with demographic factors and actual student location. **DDP** bases its forecasts on the belief that school facility planning is more accurate when facilities are located where the greatest number of students reside.

The following details the methodology used in preparing the student population forecasts.

<u>1) Progression</u> - Each year of the forecasts, 12<sup>th</sup> grade students graduate and continuing students' progress through to the next grade level and kindergarten students start school. This normal progression of students is modified by the following factors:

<u>2) Incoming Kindergarten</u> – Live birth data, reported to the Utah State Department of Health, by the resident county of the mother is used to project the base incoming kindergarten class. Additional kindergarten students may be added from future development.

Incoming kindergarten classes, for existing homes, are estimated by comparing changes in past births and birthrates. Table 2 shows the total births for Salt Lake County from 2005 to 2017. Future kindergarten classes (2020/21-2024/25) are estimated by multiplying the existing kindergarten class (2020/21) by the ratio of the projected year's births to the 2014 births. Assuming that the fall 2020/21 kindergarten class was born in 2014, DDP compared the total births in 2014 to the total births in 2015 to determine a factor for next year's kindergarten class (fall 2020/21). Similarly, 2014 was compared to 2016(fall 2021/22 K class) and 2014 to 2017 (fall 2022/23 K class). Estimated future kindergarten classes for the 2023/24 and 2024/25 schools' years is based upon the average change in births for the years 2016 and 2017.

|        |      | Birth            | S      |          |          |
|--------|------|------------------|--------|----------|----------|
|        |      | Salt Lake County | Change |          |          |
|        | 2005 | 18,680           | 104.4% |          |          |

<u>Table 2– Birth Data</u>

3) Student Mobility Factors - Student mobility factors further refine the five-year student population forecasts. Mobility refers to the increase/decrease in the migration of students within the District boundary (move-in/move-out of students from existing housing). Mobility, similar to a cohort, is applied as a percentage to each grade for every year of the forecasts.

A net increase or decrease of zero students over time is represented by a factor of 100%. A net student loss is represented by a factor less than 100% (1.00) and a net gain by a factor greater than 100% (1.00) (see example).

### Example:

60 K grade students in fall 2019/20

X 107% (1st Grade mobility Academy Park E.S.)

= 64.2 1st Grade students in fall 2020/21

| _ |            |                             |           |             |       |      |  |  |  |  |  |
|---|------------|-----------------------------|-----------|-------------|-------|------|--|--|--|--|--|
|   | Attendance | e Area Acade                | Projectio | n Date 10/4 | /2019 |      |  |  |  |  |  |
|   | ACTUAL     | PROJECTED RESIDENT STUDENTS |           |             |       |      |  |  |  |  |  |
|   | 2019       | 2020                        | 2021      | 2022        | 2023  | 2024 |  |  |  |  |  |
| К | 60         | 58.3                        | 59.0      | 56.2        | 58.5  | 58.5 |  |  |  |  |  |
| 1 | 58         | 64.2                        | 62.4      | 63.2        | 60.1  | 62.6 |  |  |  |  |  |
| 2 | 60         | 51.0                        | 56.5      | 54.9        | 55.6  | 52.9 |  |  |  |  |  |
| 3 | 53         | 63.6                        | 54.1      | 59.9        | 58.2  | 58.9 |  |  |  |  |  |
| 4 | 72         | 43.5                        | 52.2      | 44.4        | 49.1  | 47.7 |  |  |  |  |  |
| 5 | 57         | 74.9                        | 45.2      | 54.2        | 46.1  | 51.1 |  |  |  |  |  |
|   |            | 107%                        | 88%       | 106%        | 82%   | 104% |  |  |  |  |  |

| Academy Park | K> G1 | G1> G2 | G2> G3 | G3> G4 | G4> G5 |
|--------------|-------|--------|--------|--------|--------|
| E.S.         | 107%  | 88%    | 106%   | 82%    | 104%   |

Having historical student data categorized by study area is extremely helpful in calculating accurate Student Mobility Factors. The sampling used was taken over a four-year period (student data from 2016/17 through 2019/20) and three yearly groupings were calculated. For example, a comparison was made for the fall 2016/17 K student population to the fall 2017/18 1st grade students. This comparison was also conducted for the fall 2017/18 & fall 2018/19, and the fall 2018/19 & fall 2019/20 students.

|                                |              |              |              | Sch          | ool Vear 2016/ | 2017 to 2019/ | 2020 Mobility |             |              |             |             |             |

Table 3— Mobility

<u>4) Planned Residential Development</u> —Planned residential development data is collected to determine the number of new residential units that will be built over the five-year time frame of the student population forecasts. The projected units within the next five years will have the appropriate Student Yield Factor, Table 6, applied to them to determine the number of new students planned residential development will yield.

This data was obtained through discussions with the major developers within the District boundaries, the planning departments of South Salt Lake City, West Valley City, Taylorsville City and Millcreek City, the planning department of Salt Lake County and District officials. A database map of the planned residential development was created, including, when available, project name, location, housing type, total number of units and estimated move-in dates (phasing schedule). Projected phasing is based upon occupancy of the unit and is used to help time the arrival of students from these new developments.

In the student population forecast by residence DDP includes all approved and tentative tract maps in addition to any planned or proposed development that possibly will occur within the forecast timeframe. The planned residential development information and phasing estimates is a snapshot of the District at the time of this study. All of the Information may change and should be updated annually (see Table 4).

Note: The development list includes projects that occupancy will begin in the five year time period of the enrollment forecasts. Some future projects may not be included if they do not fall in this time frame. Total Units reflect the number of approved units for the project not the remaining units to be built.

|                               | Residential Development within G      |            |              |             |        |

Table 5—Residential Development Summary

*5) Student Yield Factors – 10 Year Forecasts* - Closely related to the planned residential development units are Student Yield Factors. The Student Yield Factors, when applied to planned residential development units, determine how many additional students will be generated from new construction within the District.

Table 6-Student Yield Factors

### APPLYING THE VARIABLES TO GENERATE THE FORECASTS

The following paragraphs summarize how DDP uses the factors to determine the student population forecasts. Remember that these forecasts are based on residence.

The Granite School District has been broken up into 1,108 study areas and each study area is coded for the elementary, middle school and high school attendance area in which it falls. The residential forecasts are calculated at the study area level. This means that DDP conducts 1,108 individual forecasts that are based upon the number of students residing in each study area.

The first step in running these forecasts involve listing the number of students that live in a particular study area by each individual grade (kindergarten through 12<sup>th</sup> grade). The current student base (Fall 2019/20) is then passed onto the next year's grade (2019/20's K become 2019/20's 1<sup>st</sup> graders, 2019/20's 1<sup>st</sup> graders become 2019/20's 2<sup>nd</sup> graders, and so on). After the natural progression of students through the grades is applied, then Birth Factors are multiplied by the current kindergarten class to generate a base for the following year's kindergarten class.

Next, a Mobility Factor is applied to all grades. Again, these factors consider the natural in/out migration of students throughout the District.

The last essential layer applied to the forecasts deals with additional students from planned residential development. This is a simple calculation, again conducted at the study area level, where the estimated number of new housing units for a particular year is multiplied by the appropriate Student Yield Factors. For example, if 100 single family detached (SFD) units are to be built in a specific study area in a given year, then you would multiply this number (100) by the SFD K-6 student yield factor (.334) and the resulting number of students (33.4) is divided evenly among the seven grades

To finish generating the forecasts by residence, the same process is conducted for each of the 1,108 study areas. Once the forecasts have been run at the study area level, then it is simple addition to determine forecasts for each of the District's attendance areas or for a district-wide summary. For example, the student population forecasts for Cottonwood High School are simply the summary of all of the study areas that make up this specific attendance area.

The District Summary for the forecasts (Section 3) is a total summary of all 1,108 study areas, which excludes all of the students that attend a District school but live completely outside of the District's boundaries, are unmatched due to incorrect address information and independent study students. These out-of-district, unmatched and independent study students are factored back into the forecasts by simply adding the existing totals in at the bottom of the forecasts (please see the Attendance Matrices in Section 2 for a breakdown of the out-of-district, unmatched and independent study students by school). DDP adds the current total out-of-district, unmatched students and independent study students to each year of the forecasts because there is no way to accurately forecast these students in the future.

### **ATTENDANCE MATRICES**

Three attendance matrices have been included to provide a better understanding of where students reside and where they attend school. Remember, DDP forecasts are based upon where the students reside, not where they attend school. DDP uses the actual location of where the students reside, as opposed to their school of enrollment, in order to provide the most accurate prediction of future facilities adjustments.

Therefore, since the forecasts are based upon where the students reside, the figures used as a base for each school's resident forecast may differ from the actual reported enrollment for each school.

These attendance matrices act as a check and balance for student accounting. They show where the students reside (in what School of Residence) based upon our address matching capabilities and what school they attend (School of Attendance) based upon data in the student file supplied by the District. The inclusion of these matrices is essential to showing how the students used in the forecasts match up to the District's records of enrollment for each school. The best way to plan for future facilities changes is to know where the next group of students will be residing, not necessarily which school they are currently attending.

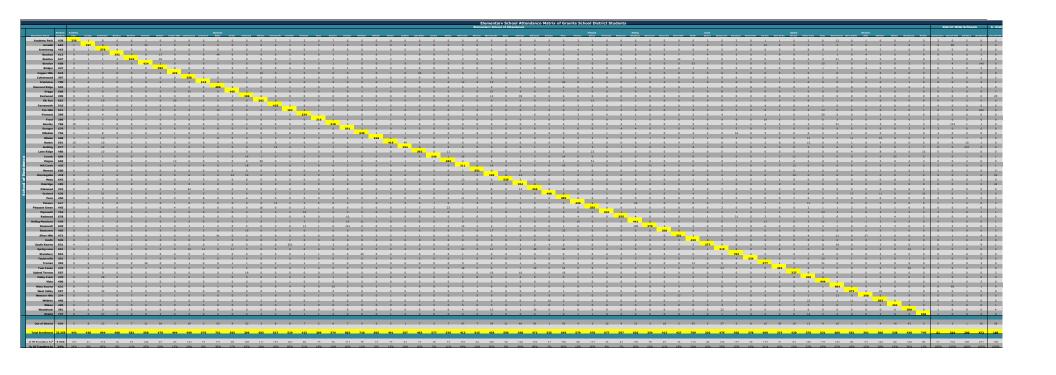

### READING THE MATRIX

Looking at the K-6 Elementary School Attendance Matrix below, let's begin with Academy Park as an example. Following down the first column with the Academy Park heading, there are 336 K-6 grade students who attend Academy Park and reside in the Academy Park attendance area. Continuing downward, 1 student attends Academy Park that resides in the Arcadia attendance area. Next the matrix shows that no students attend Academy Park and reside in the Armstrong attendance area, and so on.

Out of District refers to students who live completely outside of the Granite School District but attend one of the District's schools. There are 5 Out of District students attending Academy Park. Total Attendance shows the total number of students attending a school regardless of where they reside and reflects the District's enrollment counts for each school. There are a total of 443 students attending Academy Park.

The next step is to read across the matrix, beginning with the Academy Park attendance area row. We understand that the 336 represents the total number of K-6 grade students that reside in the Academy Park attendance area and attend Academy Park. The next column, Arcadia, refers to the number of K-6 grade students that reside in the Academy Park attendance area, but attend Arcadia. There is currently 1 student that resides in the Academy Park attendance area and attend Arcadia.

The Total Residence column is the total number of students living in each particular attendance area. There are 429 K-6 students residing in the Academy Park attendance area. The Total Attendance row is the actual number of students used as the base or actual number for each attendance area in the Fall 2019/20 forecasts

### **FIVE YEAR FORECAST SUMMARIES**

Finally, the student population is projected out five years for each of the study areas and for the entire Granite School District. The District Wide forecast summaries enable the District to see a broad overview of future student population and what impact this population will have on existing facilities. The study area listings enable the District to monitor student population growth or decline in smaller geographic areas within the District.

At any point in time, study areas and their projected resident students can be shifted between schools to assist in balancing enrollment changes. Together, these forecast summaries present the means to identify the timing of student arrivals and overall facility requirements, as well as location in order to accommodate the District's expected population shift
